

**CONTINUOUS METHOD AND APPARATUS FOR SEPARATING  
POLYMER FROM A HIGH PRESSURE CARBON DIOXIDE FLUID  
STREAM**

**Abstract of the Disclosure**

5        A method for continuously separating polymer from a high pressure fluid stream comprises subjecting the high pressure fluid stream comprising polymer particles to a filter, wherein the filter segregates the high pressure fluid stream from the polymer particles; subjecting the polymer particles to a rotating device which transports the polymer particles away from the filter, wherein the polymer particles  
10      are exposed to thermal conditions sufficient to melt the polymer particles and form a seal surrounding at least a portion of the rotating device; and separating the molten polymer from the rotating device. The method is carried out such that the separation of polymer from the high pressure fluid stream occurs under steady-state.
